<p>1. If the world population is about 6 billion people now and if the population grows continuously at an annual rate of 1.7%, what will the population be in 10 years?</p>	<p>2. Find the amount of money you will have after 10 years if \$15,000 is invested in accounts paying 6% interest compounded:</p> <p>a. Annually b. Quarterly c. Monthly d. Daily e. Continuously</p>
<p>3. In 1996 the population of Russia was 148 million and the population of Nigeria was 104 million. If the populations of Russia and Nigeria grow continuously at annual rates of -0.62% and 3.0%, respectively, when will Nigeria have a greater population than Russia?</p>	<p>4. At what annual rate compounded continuously will \$1,000 have to be invested to amount to \$2,500 in 10 years?</p>
<p>5. A promissory note will pay \$30,000 at maturity 10 years from now. How much should you be willing to pay for the note now if the note gains value at a rate of 9% compounded continuously?</p>	<p>6. As long as a plant or animal is alive, carbon 14 is maintained in a constant amount in its tissues. Once dead, however, the plant or animal ceases taking in carbon, and carbon 14 diminishes by radioactive decay. Estimate the age of a skull uncovered in an archaeological site if 10% of the original amount of carbon 14 is still present.</p>
